

A Capacity building program on “Strengthening the capabilities in Agromet data analysis and modeling”

A Capacity building program on “Strengthening the capabilities in Agromet data analysis and modeling” is being organized during 3-12 February 2015 at CRIDA, Hyderabad. About 40 scientific staff of AICRPAM Project spread across the country are taking part in the program. Recent advances in assessing climate change impacts using crop growth models are a part of the curriculum. Techniques in agro-climatic analysis in quantification of crop-weather relations are other areas on which capacity building is focused in this program.
